What is a sublicense for Parallels Mac Management for Microsoft SCCM?

- Parallels Mac Management 5.0

Information

A sublicense for Parallels Mac Management for Microsoft SCCM is a license with its own properties, created based on a Parallels Mac Management subscription. It has its own key for activation, its own expiration date and number of licenses. The licenses allocated to a sublicense are taken from the subscription.

A sublicense can be used in multi-site installation, when you need to activate more than one Proxy Server.

You can only allocate a fixed amount of licenses to a sublicense, and they will not be available for the main subscription or other sublicenses.

Only an administrator of a business account can create sublicenses.
