How to make right-click on Mac and in Parallels Desktop virtual machine

- Parallels Desktop for Mac Standard Edition

By default, Parallels Desktop is set to mimic a right-click when you press **Shift+Control** (see below) and click the mouse.

There are alternative ways to do that:

1. Using Apple mighty/magic mouse:

   ♦ Click on the **Apple sign** in top left corner of your screen and choose **System Preferences**.

   ♦ Click on **Mouse** and choose **Click on right side** in **Secondary Click**.

   ♦ Now you will easily use right-click by clicking on the right side of your mouse.
2. If you prefer using **TrackPad** for right-click, you can follow the steps from below:

   ♦ Click on the **Apple sign** in top left corner of your screen and choose **System Preferences**.
   ♦ Click on **TrackPad** and put a checkmark on **Click or tap with two fingers for Secondary click**.

   ♦ Now you can use two fingers touch for right-click.
