# How to manually assign a drive letter to a shared Mac folder or volume

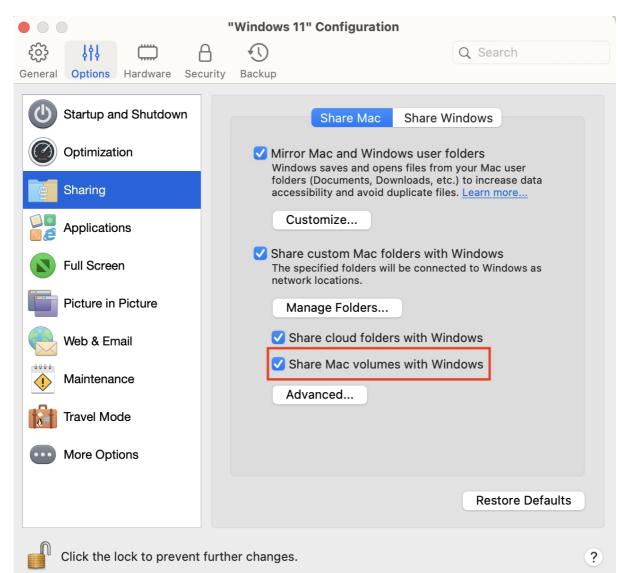

- Parallels Desktop for Mac Standard Edition
- Parallels Desktop for Mac Pro Edition
- Parallels Desktop for Mac Business Edition

# **Automatic Letter Assignment**

In addition to sharing macOS folders and drives to the virtual machine, Parallels Desktop lets you automatically assign letters to them.

There are two options that control that, and both are located in the virtual machine's <u>configuration</u> > **Options** > **Sharing** > **Share Mac**.

1. The first one is called Share Mac volumes with Windows.

If this option is enabled, all volumes — mounted disk images as well as physical drives connected to your Mac — are:

a) Connected to the virtual machine;

and

b) Assigned a letter.

2. The second option is located under Advanced, and is called Assign a drive letter to shared folders.

**Note:** the "Assign a drive letter to shared folders" option is only available in Parallels Desktop Pro or Business Edition only.

• • •	"Windows 11" Configuration
	Q Search
General Options Hardware Securit	ty Backup
Startup and Shutdown	Share Mac Share Windows
Optimization	<ul> <li>Mirror Mac and Windows user folders</li> <li>Windows saves and opens files from your Mac user</li> </ul>
Sharing	folders (Documents, Downloads, etc.) to increase data accessibility and avoid duplicate files. <u>Learn more</u>

## **Manual Letter Assignment**

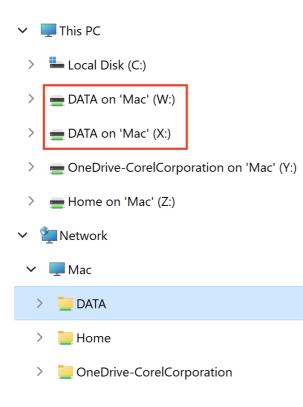

If you wish to manually assign a particular letter to a Mac folder or a volume connected to your Mac, you need to do the following.

#### Make sure that the drive/folder is being shared

By default, only macOS Home folder and cloud folders are being shared to the virtual machine. Open the virtual machine's <u>configuration</u> > **Options** > **Sharing** > **Share Mac** > **Manage folders**. There, you can click **Manage folders** and select a folder or a whole volume that you wish to share with the virtual machine.

On Name	Path	Permissions	🗁 Macintos		DATA		
General		(2)	🕀 DATA 🔺	Name	ize	Kind	Date Added
		$\cup$				1 01001	
			Google D	> 🚞 untitled folder 2		Folder	
Custom folders			OneDrive	> 🚞 untitled folder 3		Folder	
			> 🚞 untitled folder 4		Folder		
			bas Box	> 🚞 untitled folder 5		Folder	
			Network	> 🚞 untitled folder 6		Folder	
				> 🚞 untitled folder 7		Folder	
			Tags	> 🚞 untitled folder 8		Folder	
			Red	> 🚞 untitled folder 9		Folder	
1)		Orange	New Felder				
1			Yellow	New Folder			Cancel
+ _							

As a result, the drive resource will be available in the virtual machine. However, a letter will be assigned automatically.

On this screenshot, it is even assigned a letter twice:

- First, because "Files/Apps" is a volume, therefore it is already being shared due to the **Share Mac volumes** with Windows being enabled;
- Second, because we've shared it manually using Manage Folders, and the Assign a drive letter to shared folders is enabled.

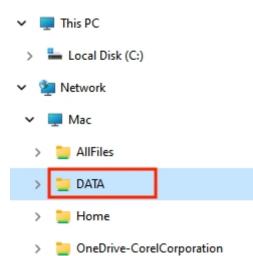

#### **Disable Automatic Letter Assignment**

Although this step is not necessary, it will prevent you from having duplicates that are shared automatically.

1. Open the machine's <u>configuration</u> > **Options** > **Share Mac** > **Advanced** and uncheck **Assign a drive letter to shared folders**.

2. And for volumes, uncheck Share Mac volumes with Windows.

As a result, your shared folder/volume will only be available as a network resource without a letter assigned.

### Manually Assign a Letter

Now, all that's left is to right-click on the resource > Map network drive... and proceed with assigning a letter.

Documents	+	Expand		
Pictures		Lipanu		
🛅 Music		Open in new tab		
🛅 Videos	2	Open in new window		
	물	Map network drive		
🗸 💻 This PC	$\checkmark$	Pin to Quick access		
> 🐁 Local Disk (	$\Diamond$	Pin to Start		
🗸 🛬 Network	B	Properties		
🗸 📮 Mac	>_	Open in Terminal		
> 📜 AllFiles	62	Show more options		
> 늘 data				
> 📒 Home	Q			

The resource will be permanently assigned to the letter you select.
