

How To: Use three-finger gesture in virtual machines

- Parallels Desktop for Mac Standard Edition

Symptoms

I cannot use horizontal 3-finger scroll inside the virtual machine. For example, I cannot swipe between the web pages in Internet Explorer.

Cause

"Scroll left or right with two fingers" is selected in System Preferences > Trackpad as a default way of swiping between pages.

Resolution

1. Go to **System Preferences > Trackpad > More gestures**
2. Select **Swipe with two or three fingers** or **Swipe with three fingers** under the **Swipe between pages** option.

***Note:** These changes will deactivate the "Three finger drag" feature*
