

How to install Adobe Adobe Reader on a Mac using the Software Distribution

• Parallels Device Management

Information

- 1. Download the Adobe Acrobat Reader .dmg package from get.adobe.com/reader/enterprise
- 2. When creating an installation package in Parallels Mac Management, use the following command:

```
:AdbeRdr11010_en_US.dmg/Adobe Reader XI Installer.pkg::
```

Note: in this example we used the file named AdbeRdr11010_en_US.dmg downloaded from Adobe.com. If you download the file with some other name, make sure to use it accordingly.

Important: Verify the .DGM image you downloaded contains the .PKG file inside
