

Printer's specific features in Parallels Remote Application Server

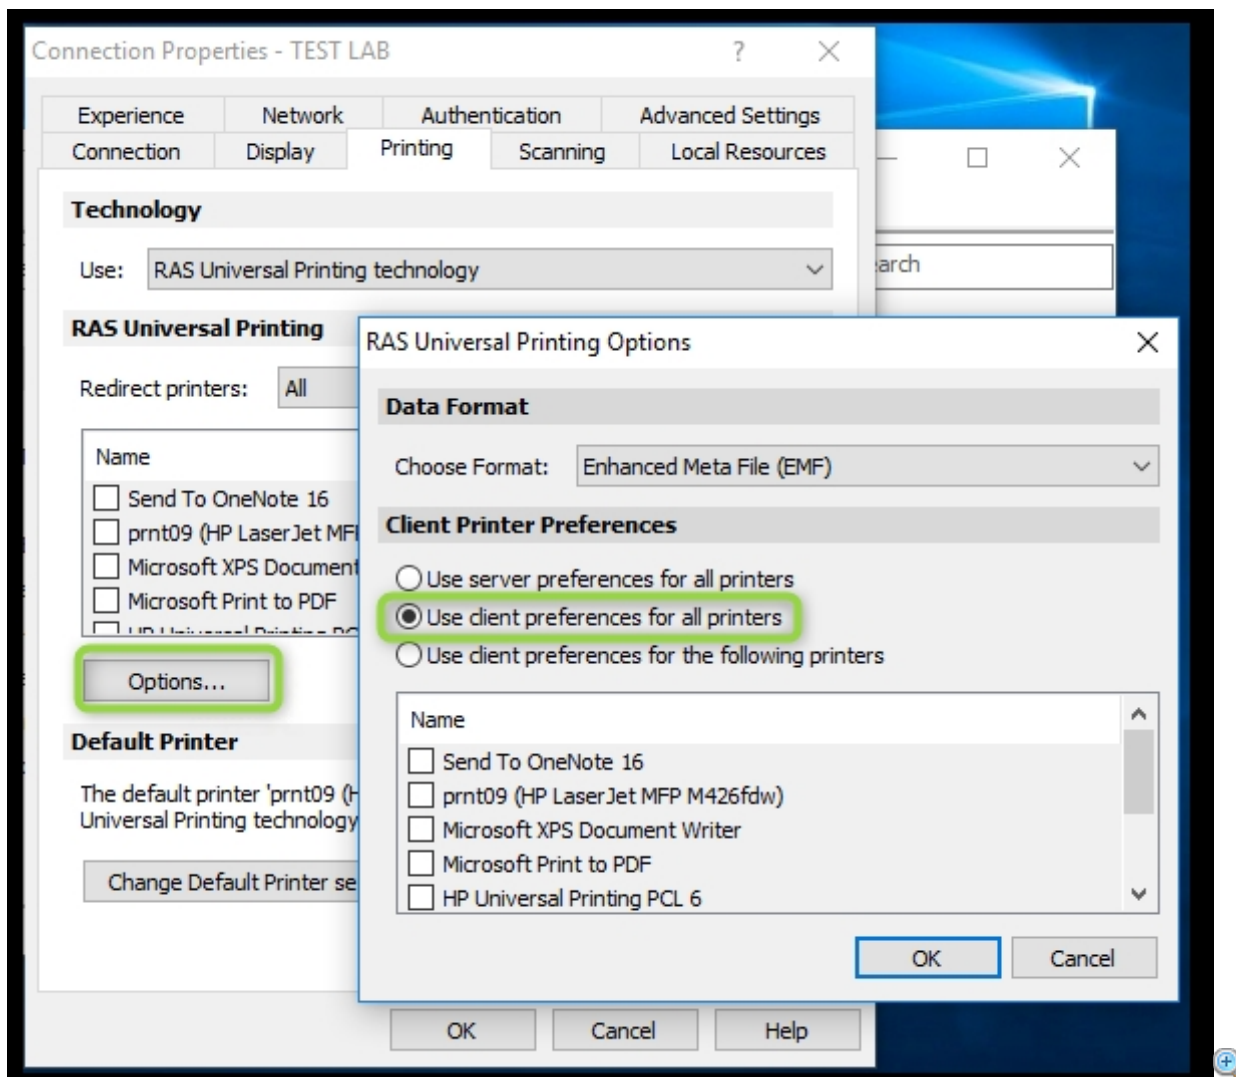

- Parallels Remote Application Server 19.1
- Parallels Remote Application Server 18.3
- Parallels Remote Application Server 18.0
- Parallels Remote Application Server 18.1
- Parallels Remote Application Server 18.2
- Parallels Remote Application Server 19.0

Question

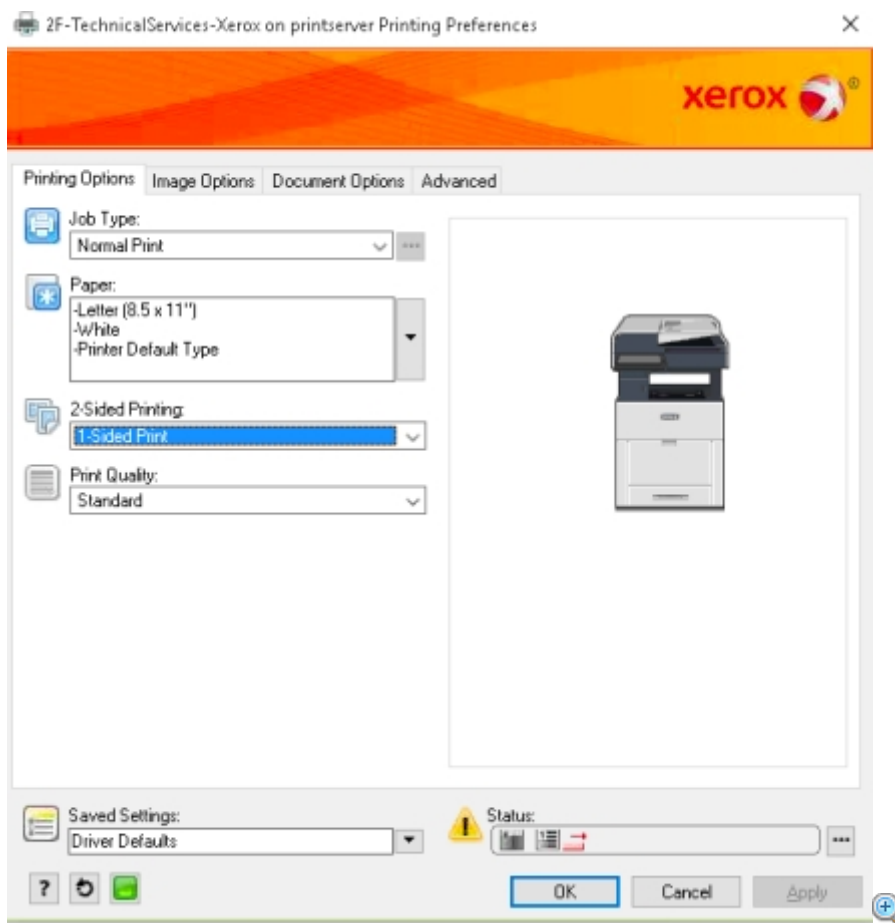

Can I use all the specific features of my printer in Parallels Remote Application Server?

Answer

1. At Parallels Client go to **Connection Properties > Printing tab > Options > select Use client preferences for all printers**

2. Re-login to Farm and launch the application. A local printer preferences dialog will open when you click Print in an application. The dialog will contain a full set of options for a particular printer that you have installed on your local computer including paper size setting, color/duplex printing, etc.
