Unable to suspend Boot Camp based virtual machine

- Parallels Desktop
- Parallels Desktop for Mac Standard Edition

Symptoms

I am unable to suspend my virtual machine based on a Boot Camp partition amp because of the error:

Cause

Some of **NTFS** drivers such as **Paragon Software** or **Tuxera** installed on the Mac. Suspending is not possible because it may corrupt the Windows installation because such drivers allows modifying the Boot Camp partition.

Resolution

Use **Shut Down** instead of **Suspending**. Otherwise, you need to uninstall NTFS drivers from your Mac in order to have an ability to suspend virtual machine.
