How to disable clipboard sharing in a remote session

- Parallels Remote Application Server

Symptoms

How to disable clipboard sharing in a remote session?

Resolution

You can configure group policy to prevent clipboard from sharing (on Terminal server locally or enforce it via AD/DC GPO):

```
Computer Configuration > Administrative Templates > Windows Components > Remote Desktop Services > R
```

To inhibit clipboard for particular user, please enforce the following policy via AD/DC GPO set on required object:

```
User Configuration Policies > Administrative Templates > Windows Components > Remote Desktop Service
```

Please note that in Server 2003 group policy location is different:

```
Administrative Templates > Windows Components > Terminal Services > Client/Server data redirection:
```
