

How to check which configuration baselines have been applied on the Macs?

- Parallels Device Management

Information

The following reports (**SCCM > Monitoring > Overview > Reporting > Reports**) supported for configuration baseline:

1. Compliance history of a configuration baseline
2. List of assets by compliance state for a configuration baseline. List of unknown assets for a configuration baseline
3. Summary compliance by configuration baseline
4. Summary compliance of a configuration baseline for a collection.

On the Mac, if profile is applied it is listed **System Preferences > Profiles**

Alternatively, you may execute following command in Mac Terminal:

```
sudo profiles -L
```

The output will show list of the profiles which are installed in the system.
