

Virtual machine window stays in Full Screen after shutdown

- Parallels Desktop
- Parallels Desktop for Mac Business Edition
- Parallels Desktop for Mac Pro Edition
- Parallels Desktop for Mac Standard Edition

Symptoms

After I upgraded to Parallels Desktop 12 for Mac my virtual machine window now stays in **Full Screen** mode after I shut it down.

Resolution

You may change the way how virtual machine window would behave after shutting down the virtual machine:

1. Open virtual machine configuration.
2. Switch to **Options** tab > select **Startup and Shutdown** -> select **Custom**.
3. From **On VM Shutdown** drop down menu choose the most convenient scenario for you.
