

Unable to find 'Enable nested virtualization' option in virtual machine's configuration

- Parallels Desktop for Mac Business Edition
- Parallels Desktop for Mac Pro Edition

Symptoms

Unable to find '*Enable nested virtualization*' option in **Windows 10** virtual machine configuration on **Parallels Desktop Pro/Business** edition.

Cause

Wrong Operation System type is specified in virtual machine's **Configuration**.

Resolution

Change virtual machine's **Operation System** type:

1. **Shut down** virtual machine and open it's configuration.
2. Switch to **General** tab.
3. Press dropdown menu located above the **Name** field:
4. Switch to **Auto-detect** or **Windows 10**.
5. Switch to **Hardware** tab then to **CPU & Memory**.
6. Expand **Advanced settings** option and tick '*Enable nested virtualization*' option.
7. Close configuration window and launch virtual machine.
