How to specify Web Proxy Server Settings for Parallels Software Update Point

- Parallels Device Management

Information

If you are using a web proxy server in your organization, you need to specify its settings, so that Parallels OS X Software Update Point can access the Internet:

1. Log in to the computer where you have **Parallels OS X Software Update Point** installed.
2. Open the **Registry Editor** (**regedit.exe**) and navigate to the following key:

   64-bit OS:

   ```
   HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\Parallels\Parallels Mac Management for Microsoft SCCM\Sup
   ```

   32-bit OS:

   ```
   HKEY_LOCAL_MACHINE\SOFTWARE\Parallels\Parallels Mac Management for Microsoft SCCM\Sup
   ```
3. Add the following values:

   - **NetProxyHost** — String. Proxy server hostname.
   - **NetProxyPort** — DWORD. Proxy server port number.
   - **NetProxyUserName** — String. User name to connect to the proxy server (if required).
   - **NetProxyUserPassword** — String. User password (if required).

4. Restart **Parallels Software Update Point** service.
