How to detect if a Mac was enrolled by Network Discovery or AD System Discovery

- Parallels Device Management

Information

To check using what discovery method a **Mac** was enrolled, go to the **Devices** in **SCCM** highlight the Mac right click and go to **Properties**.

In case the **Mac** was enrolled via **Network Discovery** the **Agent Name** value would be: "MP_ClientRegistration", "Heartbeat Discovery".

In case the **Mac** was enrolled via **Active Directory System Discovery** the **Agent Name** value would be: "SMS_AD_SYSTEM_DISCOVERY_AGENT".
