Properties of a Parallels Mac Management for Microsoft SCCM sublicense

- Parallels Device Management
- Parallels Mac Management 5.0

About sublicensing

Parallels Mac Management for Microsoft SCCM licenses can be split into one or more subsets of licenses (hereafter referred to as sublicenses), each has its own license key and supports a certain number of Mac computers that you can manage in SCCM. Each sublicense has its own date of expiration.

Main license pool

In a subscription with no sublicenses, all product licenses remain in a single array, named the main license pool. After creating a sublicense, some licenses can be used via that sublicense, while other licenses still remain in the main license pool and can be distributed to other sublicenses or used for a product activation via the primary subscription license key.

Reading the sublicense properties on the product details page

Total number of licenses

The total number of Mac computers that you can manage in SCCM.

Licenses used

The number of licenses taken from the main license pool for sublicenses.

Available

The number of licenses that remain in the main license pool after allocating some to sublicenses. This is the number of licenses you can allocate to your new sublicenses.

Type

The type of the sublicense: Primary (the main key which is split into sublicenses) or Reserved (sublicense with reserved number of licenses, taken from the main license pool).

Max lic.

The maximum number of managed Macs with the usage of the corresponding sublicense (it?s initially set at the time of sublicense creation and can be changed later).

Used

The number of used licenses in the particular sublicense.

Available

The number of licenses that are effectively available in the particular sublicense.

Expires on

The sublicense expiration date.
