

Activation of Parallels Mac Management located behind web Proxy

- Parallels Device Management

Parallels Mac Management v7.0 and above

1. Log into the computer where **Parallels Configuration Manager Proxy** service is installed.
2. Open the Registry Editor (**regedit.exe**) and navigate to the following key:

64-bit OS:

HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\Parallels\Parallels Mac Management for Microsoft SCCM\CmProxy

32-bit OS:

HKEY_LOCAL_MACHINE\SOFTWARE\Parallels\Parallels Mac Management for Microsoft SCCM\CmProxy

3. Create parameters for the Web Proxy Server settings:

Parameter	Datatype	Description
NetProxyHost	String	Proxy server hostname
NetProxyPort	DWORD	Proxy server port number (decimal)
NetProxyUserName	String	User name to connect to the proxy server (if required)
NetProxyUserPassword	String	User password (if required)

4. Open the Services applet (**services.msc**) and restart **Parallels Configuration Manager Proxy** service.
5. [Activate Parallels Mac Management by following this article.](#)

Parallels Mac Management 6.1 and earlier versions

In step 2 of the above procedure the registry path is different:

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControl\Set\services\pma_cm_proxy\Parameters

By default, the Parameters subkey does not contain any values.
