

Using Remote Clipboard tool to transfer text between local and remote machines

- Parallels Remote Application Server 18.0
- Parallels Remote Application Server 18.1
- Parallels Remote Application Server 18.2
- Parallels Remote Application Server 18.3
- Parallels Remote Application Server 19.1
- Parallels Remote Application Server 19.0

Remote Clipboard tool allows user to transfer text from local local machine clipboard to remote machine clipboard and vice versa.

- To transfer text from local machine to remote machine clipboard click **Remote Clipboard** tool icon and **paste** desired text to appeared window. Once pasted text will be automatically stored in remote machine's clipboard.
 - To transfer text from remote machine to local machine just copy the text on remote machine in a usual way and it will automatically appear in Remote Clipboard tool window.
