

How to Install, Upgrade, and Uninstall Microsoft Office 2016 for macOS Using Parallels Mac Management for Microsoft SCCM

• Parallels Device Management

Information

The **Software Distribution** feature of **Parallels Mac Management** can be used to install, upgrade, or uninstall **Microsoft Office 2016** in **macOS**.

To install or upgrade **Microsoft Office 2016 for Mac** obtain the **Microsoft Office 2016 for Mac** installation image file and place it into a folder accessible from the **Configuration Manager** console. Create a software distribution package, provide the folder name and path as the **Source folder** parameter.

When specifying the command line parameter, use the following line:

:SW_DVD5_Office_Mac_Standard_2016_MultiLang_-3_.iso_MLF_X20-52737.ISO/Microsoft_Office_2016_Volume_

Note: A command line for a .dmg installation image is similar to a command line for a .iso installation.

Use the following script to remove **Microsoft Office for Mac 2016**.
