

## How to launch a Standard RDP connection via command line

• Parallels Remote Application Server

## Information

To launch standard RDP connection via command line, follow these steps:

- 1. Create the **RDP connection** in Parallels Client.
- 2. Fill out server address/username/password.
- 3. Right-click on that connection and create a shortcut on desktop.
- 4. Open shortcut properties, and the copy the whole string from the **Target** field.
- 5. Paste it into CMD, press Enter and RDP connection will be established.
