

How to manually run Nmap utility

- Parallels Mac Management 5.0
- Parallels Device Management
- Parallels Mac Management 6.0
- Parallels Mac Management 6.1

Information

1. Go to the server with Parallels Mac Management Proxy installed and open Command Prompt
2. Navigate to Nmap directory:

```
cd C:\Program Files (x86)\Nmap
```

3. Run the Nmap manually with below command, specifying subnets to scan (for example nmap.exe 10.10.10.0/24 11.11.11.0/24):

```
nmap.exe %subnet/24% %subnet/24% %subnet/24% -T5 -p 22,548,5900 -oN out.txt
```

Sample command:

```
nmap.exe 10.150.3.0/24 10.150.2.0/24 10.150.0.0/24 -T5 -p 22,548,5900 -oN out.txt
```

After Nmap is finished, **out.txt** file will be created in **C:\Program Files (x86)\Nmap**.
