

How to Secure an OSD Task Sequence with a Password

• Parallels Device Management

Information

This article describes how to Secure an OSD Task Sequence with a password. This feature is available since Parallels Mac Management v7.2.

Securing a Task Sequence with a Password

1. Right click on a Task Sequence > Edit OS X Task Sequence

2. Add "Set Variables" step and name it "Set Password" (or use any other convenient name).

3. Clck Add Variable button and add OSDPassword variable. Select the Secret Value option.	
4. Add Execute Script step and name it Check Password (or use any other convenient name).	
5. Open the attached PasswdDlg.py file and paste the script that it contains into the Script area of Task Sequen	ice
step.??????
