

Alt+Tab key combination doesn't work in RDP session initiated from a Windows virtual machine

- Parallels Desktop for Mac Business Edition
- Parallels Desktop for Mac Pro Edition
- Parallels Desktop for Mac Standard Edition

Symptoms

I am connecting to a remote Windows computer from a Windows virtual machine via RDP. I want to use Alt+Tab key combination to switch windows of remote desktop opened in a full-screen view mode.

Cause

RDP is configured incorrectly.

Resolution

1. Start a Windows virtual machine.
2. In Windows search bar type in "mstsc" and start Remote Desktop Connection.
3. On the appeared window expand a drop-down menu "Show Options" from the lower-left corner.

4. Then click the "Local Resources" tab and from "Keyboard" submenu select "On the remote computer" option.

4. Connect to a remote computer and try using Alt+Tab key combination.
