

"Set Hostname" step fails during OSD task sequence

- Parallels Device Management

Symptoms

pmm_launchd_helper.log:

```
set_hostname:Error: Missed required argument
set_hostname:Error: Usage: set_hostname.sh -hostname <hostname>
07-17 16:40:49.741 D /TsExecutor:214:307/ Step 'Set Hostname' failed (Script
set_hostname.sh failed (exit code: 1, status: 0))
07-17 16:40:49.741 D /TsExecutor:214:307/ Child step 'Set Hostname' failed
```

Cause

OSDComputerName variable is not added on **All Mac OS X Systems** collection.

Mac that is being imaged is already known to SCCM as a device.

Resolution

Add **OSDComputerName** to **All Mac OS X Systems** collection:
