

Unable to uninstall NetBoot server

- Parallels Device Management

Symptoms

It's impossible to uninstall NetBoot server component after removing WDS service from the Distribution Point:

Resolution

1. Create DWORD registry value on the server and set it to 1:
`HKLM\SOFTWARE\Microsoft\SMS\DP\IsPXE`
 2. Make sure that this registry key exists on the server and create it manually if it is absent:
`HKLM\SOFTWARE\Microsoft\SMS\Operations Management\SMS Server Role\SMS Distribution Point`
 3. Get PMM installer of the appropriate version and run this command in command prompt:
**"Parallels Mac Management for SCCM.exe" /modify /quiet
remove=FEATURE.NetBoot**
 4. Make sure that NetBoot server has been uninstalled from the server;
 5. Delete the registry key that was created in step 1
