|| Parallels[®]

How to redirect a folder on Android 10 and above

• Parallels Remote Application Server 19.0

On Parallels Client for Android:

- 1. Go to **Edit connections** (long tap on RAS connection> Gear icon).
- 2. Advanced>Local resources> enable **Share folder**. Accept the permission to get access to file system.

← Local resources	
Clipboard redirection Bidirectional	
Open URLs on Remote server	
Open mail links on Remote server	
Redirect pen input	
Create desktop shortcuts automatically	•
Folder redirection	
Share folder Share the internal application folder to exchange files between your mobile device and remote computer. If this functionality is not allowed by the RAS policies, please contact your administrator for more info.	

3. Once you configure it, a **Shared folder** icon will appear.

4. Choose which file should be shared with remote desktop/application.

5. Use RAS connection to launch a published item.

6. Redirected folder could be observed.

7. Files are matching in local folder and redirected drive.
