

Fix Dropbox files having 0-byte size inside a virtual machine

- Parallels Desktop for Mac Standard Edition
- Parallels Desktop for Mac Business Edition
- Parallels Desktop for Mac Pro Edition
- Parallels Desktop for Mac App Store Edition

If you have macOS 12.3 or later installed as the main operating system of your Mac, you may have issues opening Dropbox online-only files inside your virtual machine - the files might be shown as zero bytes in size.

Access online-only files from the virtual machine

Note: Online-only files have a cloud icon next to them.

- 1. Open your Dropbox folder on the Mac side in Finder.
- 2. Right-click the file you want to have available.
- 3. Click Make available offline.
- 4. The file will be downloaded within your Dropbox folder and can be opened from the virtual machine.

Once an online-only file has been downloaded in Dropbox, you'll see the cloud icon change to a green checkmark.
