

Give specific users or groups admin access (System Settings / Dashboard)

- Parallels Secure Workspace

Resolution

Users that have this level of administrator access will be able to view and change all settings on the appliance.

Procedure for Active Directory Groups

1. Create a new or choose an existing group on the domain controller that will be allowed Admin access in Parallels Secure Workspace. We will use the *Workspace-admin* group as an example.
2. Add the users as a member of this group in the Active Directory.
3. Open **System Settings > Manage > Labels**.
4. Use the [Import Groups from AD] button.
Alternatively, use [Add] to manually create the label:
 - ◆ Key: group
 - ◆ Value: should be the name of the group: *Workspace-admin*
 - ◆ Press [Add] to create the label
5. Navigate to **System Settings > Configure > User Connector: Login Permissions**.
6. Click the pencil next to **Domain Administrators** and add the group label.
 - ◆ Type *group*: to get a list of all group labels
 - ◆ Type the Active Directory group name (*Workspace-admin*) to get the specific label

Now all users that are a member of the Active Directory user group will see the System Settings and Dashboard apps.

Procedure for Active Directory Users

1. Navigate to **System Settings > Manage > Labels**.
2. Use the [Import Users from AD] button.
Alternatively, create a new label by clicking [Add].
 - ◆ Key: username
 - ◆ Value: should be the name of the user: *someuser*
 - ◆ Press [Add] to create the label.
3. Navigate to **System Settings > Configure > User Connector: Login Permissions**.
4. Click the pencil next to **Domain Administrators** and add the user label.
 - ◆ Type *username*: to get a list of all user labels.
 - ◆ Type the username to get the specific label.

The user *testuser* will see the System Settings and Dashboard apps
