Using Folder Redirection with Parallels Client for iOS

• Parallels Remote Application Server 19.1

Parallels Client v19 for iOS (iPadOS) introduces support for folder/file import from the iOS device storage to the remote server.

Prerequisites:

Parallels Client v19 or newer

iOS (iPadOS) 13 or newer.

How-to:

On Parallels Client for iOS:

- 1. Go to Edit connections (long tap on RAS connection> Gear icon).
- 2. Advanced>Local resources> enable Share folder. Accept the permission to get access to the file system.
- 3. Once you configure it, a Shared folder icon will appear.
- 4. Select files which should be shared with a remote desktop/application.
- 5. Use RAS connection to launch a published item.
- 6. Files can be imported at any time by clicking the **Folder** icon in the toolbar.
