

## Enabling front-end logging in the Workspace (keyboard and copy-paste)

• Parallels Secure Workspace

## Resolution

- 1. Open the **Developer** tools of the Internet browser.
  - Be careful to not perform this procedure in a browser that is already open in the remote desktop session. It's best to click in the Workspace's navigation pane first (so the active application session does not have focus).
  - In most Internet browsers on Windows, press [F12] to open the developer tools.
- 2. Navigate to the **Console** tab.

Enter the instruction below and confirm by pressing [Enter].

Enabling the clipboard log:

```
svGlobal.clipboardLog = true
```

Enabling the keyboard log:

svGlobal.keyboardLog = true

The contents of the console tab can usually be saved by right-clicking in the console and choosing the proper action.
