

Adding an entry to the Microsoft Windows hosts file

• Parallels Secure Workspace

Resolution

- Open NotePad as an administrator.
 How-to: search for NotePad and right-click to run as Administrator.
- 2. Go to File > Open and select C:\windows\system32\drivers\etc\hosts
- 3. At the bottom of the file, add a host entry by specifying an IP address and host; for example: 192.168.1.1 example.awingu.com
- 4. Click on **File > Save** to confirm the changes.

Mind that it may require to restart the Internet browser to take effect.
