Accessing Parallels Browser Isolation - End Users

The User portal is an all-in-one platform that enables users to launch all SaaS applications published by their organization in a secure manner. With the help of Parallels Browser Isolation Technology, every app is completely safeguarded against malware, ransomware, phishing attacks, and other cyber threats. This technology ensures that every app is isolated from the user's endpoint and runs in a separate container in the cloud. As a result, users can enjoy a seamless and safe experience while accessing all their SaaS apps in one place.
