

How to Distribute System Center Endpoint Protection (SCEP) on Mac OS X Using Software Distribution Feature of Parallels Mac Management for Microsoft SCCM

- Parallels Device Management

Information

Detailed instruction on how to distribute software to Mac OS X computers can be found in the Software distribution section of the [Parallels Mac Management for Microsoft SCCM 2012 administrator's guide](#).

Download *scep.i386-x86_64.en.0.dmg* file from [System Center 2012 R2 Configuration Manager and Endpoint Protection](#) and copy it into a folder on a Configuration Manager site server.

When creating a software distribution package:

1. Specify the folder containing the *?.dmg?* file that you've downloaded earlier as the **Source folder** parameter.
2. Specify the following command as the **Command line** parameter:

```
:scep.i386-x86_64.en.0.dmg/Resources/Installer.pkg::
```
