

Unable to create Mac OS X Yosemite virtual machine.

- Parallels Desktop for Mac Standard Edition

Symptoms

I would like to create a Mac OS X Yosemite virtual machine but unable to do that because of "**no entry**" sign.

Cause

VM misconfiguration.

Resolution

1. Shut down the Virtual Machine. Make sure that the virtual machine is shut down. If it is in a suspended state, please run it and then shut down (**Actions > Shut Down**).
2. Open your virtual machine's Configuration > **Hardware Tab > Boot Order > Advanced**.
3. Add the following boot flag into the **Boot flags** field:

```
vm.efi.mac_recovery=1
```

4. **Start** the virtual machine.
