

How to check that Software package deployment on client completed successfully?

- Parallels Device Management

Symptoms

Can you tell me where on the client should I see the software package deployment (not SCCM application) ?

Resolution

You may find result of software package deployment in

```
"/Library/Logs/pma_agent.log"
```

If package installed successfully, there will be record in the log which looks like the following:

```
Software deployment 'S1220001-S1200007-87EEFD4B' completed with 0
```
