

How to install Adobe Flash Player on a Mac using Application Portal

- Parallels Device Management

Information

1. Download the latest [Standalone Installer of Adobe Flash Player](#).

NOTE: Links to download Standalone installers located under **Still having problems** part:

2. Prepare Adobe Flash Player for Configuration Manager. See [Parallels Mac Management for SCCM 2012 Administrators Guide.pdf, page 89](#)

Example of the command used to create the file in the **.cmmac** format:

```
./CMAppUtil -c install_flash_player_16_osx.dmg -o ~/Desktop/
```

When you have the **.cmmac** file, copy it to a network share where it can be accessed from the computer running the Configuration Manager console. In our example the file name is *Install Adobe Flash Player.app.cmmac*

3. Create a Configuration Manager application using the Create Application Wizard. See [Parallels Mac Management for SCCM 2012 Administrators Guide.pdf, pages 90-92](#) for detailed instructions.
4. Specify the Installation Command Line.

```
'./Install Adobe Flash Player.app/Contents/MacOS/Adobe Flash Player Install Manager' -install
```

5. Deploy Adobe Flash Player on the selected Macs
6. Install Application on a Mac.
