How to install Adobe Flash Player on a Mac using the Software Distribution

- Parallels Device Management

Information

Using .app package

1. Download the latest Standalone Installer of Adobe Flash Player.

   NOTE: Links to download Standalone installers located under **Still having problems** part:

2. When creating an installation package in Parallels Mac Management, use the following command:

   ```
   hdiutil mount install_flash_player_16_osx.dmg && '/Volumes/Flash Player/Install Adobe Flash Play
   ```

   Note: *in this example we used the file named* `install_flash_player_16_osx.dmg` *downloaded from Adobe.com. If you download the file with some other name, make sure to use it, accordingly.*

Using the .pkg package

1. Download the latest Standalone Installer of Adobe Flash Player.

   NOTE: Links to download Standalone installers located under **Still having problems** part:

2. When creating an installation package in Parallels Mac Management, use the following command:

   ```
   :install_flash_player_16_osx_pkg.dmg/Install Adobe Flash Player.pkg::
   ```

   Note: *in this example we used the file named* `install_flash_player_16_osx_pkg.dmg` *downloaded from Adobe.com. If you download the file with some other name, make sure to use it, accordingly.*
3. Instruct Mac users to follow the Adobe Flash Player installation wizard appearing on the screen.
