The devices from outside of specified boundaries were authenticated during the Network Discovery

- Parallels Device Management

Symptoms

Authenticated devices are outside of specified boundaries and subnet.

Cause

The option **'Search local subnets'** was enabled. This caused such behavior (scanning of all subnets available from local interfaces of the machine where **Proxy Configuration Manager** installed

Resolution

We would recommend you to NOT turn on **'Search local subnets'** in case this is not required.
