

How to install Sophos Anti-Virus using Software Distribution

- Parallels Device Management

Symptoms

How to distribute Sophos Anti-Virus for Mac using Software Distribution

Resolution

1. Copy the **Sophos Installer.app** installer file and the **Sophos Installer Components** directory to a preferred location on the server.
2. Create a Software Package, specifying that location as a **Source folder** in **Specify information about this package** page of **Create Package and Program Wizard** dialog.
3. In the **Specify information about this standard program** page of **Create Package and Program Wizard** dialog:

- ◆ Copy and paste the following command in the **Command line** field:

```
chmod -R 777 "Sophos Installer.app" && mv "Sophos Installer.app/Contents/MacOS/Sophos Ins
```

- ◆ Set **Run mode** to **Run with administrative rights**

4. Finish the package creation and proceed with the deploying as described in [Parallels Mac Management Administrator Guide](#), **Software Distribution** part.
