

You have no active servers configured. You need one configured server in order for the system to work.

- Parallels Remote Application Server

Symptoms

I am receiving this notification in console while running Remote Application Server:

```
You have no active servers configured. You need one configured server in order for the system to work.
```

Cause

There are no resources available for publishing.

Resolution

You need to add **RD Session Hosts**, **VDI hosts** or **Remote PCs** as described in the [Administrator's guide](#).
