

How to map specific folder from a user's PC into a RAS session.

- Parallels Remote Application Server

Information

In order to map a folder (for example **Documents**) from a user's **PC** into **Parallels RAS** session, do the following:

1. Add the folder as a drive: right click on **Computer** in **File Explorer** > choose **Map network drive...** > specify the letter and path for the drive.
2. Open **Parallels RDP Client** > **Connection Properties** > **Local Resources** tab > click on **Configure Drives...** > check the check the required volume, that you specified previously ("**Documents**" in our example)
