How to open a local file using a published application.

- Parallels Remote Application Server

Information

To open a local file using a published application follow the steps below:

On the server:

- Go to **RAS Console> Publishing>** select needful application> switch to **File Extentions** tab> check **Associate File Extensions** and specify required extension(s) of file(s) that shall be used by published app.

On the client:

- On the **Parallels RDP Client** side **Refresh** the connection.
- Right click on the file you want to open > verify that **2X KickOff** is chosen as default program.
