

Publishing a Network Folder from a Terminal Server

- Parallels Remote Application Server 15.0
- Parallels Remote Application Server

To publish a network folder:

1. In the RAS Console, select the Publishing category and then click the Add icon below the **Published Resources** tree (or right-click inside the **Published Resources** box and click Add in the context menu). This will launch the publishing wizard.
2. On the **Select Item Type** wizard page, select **Folder** on the file system and click Next.
3. On the **Select Server Type** page, select **Terminal Server** and click **Next**.
4. On the **Publish From** page, select the server(s) to publish from. Note that if you have just one terminal server, the **Publish From** page will not appear.
5. On the **UNC Folder** wizard page, specify the usual application properties.
6. In the UNC path field, enter the UNC path of the folder you wish to publish. Click the [...] button to browse for a folder (it may take some time for the Browse for Folder dialog to open).
7. Click **Finish** to publish the folder and close the wizard.

To view publishing settings click on Publish Resources > Application Tab.

The **Target** property will always be set to **PublishedExplorer.exe**. This binary is created automatically (via agents pushing) and is simply a copy of the standard explorer.exe executable.

The **Parameters** property specifies the network folder that we want to publish. The folder path can be in any format that the explorer.exe can handle.

Please note that although you have all standard application property tabs enabled for this publishing item, the following items should be ignored:

- **Publish From**
 - **File Extensions**
-
