

## How can I reactivate Parallels Desktop for Mac with a new key?

- Parallels Desktop for Mac Pro Edition
- Parallels Desktop for Mac Standard Edition

### **Symptoms**

I need to reactivate my Parallels Desktop copy with a new license.

### **Resolution**

To replace your current Parallels Desktop for Mac license with a new one, for example, with a license for another edition, click on the **Parallels** menu and select **Account & License**.

In the activation window click **Enter a key**.

**Note:** the key you enter will be automatically registered under the account you are signed into. If you would like to switch the account, sign out of the current one, as advised at the beginning of [KB 123277](#).

Enter your new license and click on **Activate**.

If the new key is an upgrade one, you will also need to enter a key for a previous version. Visit [KB 123222](#) for more information on activating Parallels Desktop with an upgrade license.
