

How to check client saved jobs on Mac?

- Parallels Remote Application Server

Client saved jobs on **Mac** are located in /private/var/spool/cups folder.

In order to check the print output on Mac side:

1. Open the **Terminal** and copy /private/var/spool/cups folder to **Downloads**(or any other folder):

```
sudo cp -r /private/var/spool/cups /Users/<username>/Downloads
```

2. Set '755' permissions to the copied 'cups' folder:

```
sudo chmod -R 755 /Users/<username>/Downloads/cups
```

3. Open the copied "cups" folder and add extension ".pdf" to files like "d00001-001" "d00002-001" and e.t.c.
 4. Apply all settings and open the files.
