

How to install Secunia CSI Agent for Mac using Software Distribution

- Parallels Device Management

Symptoms

How to distribute **Secunia CSI Agent for Mac** using **Software Distribution**

Resolution

1. Copy the **Secunia CSI Agent for Mac (csia)** to a preferred location on the server.
2. Create a Software Package, specifying that location as a **Source folder** in **Specify information about this package** page of **Create Package and Program Wizard** dialog.
3. In the **Specify information about this standard program** page of **Create Package and Program Wizard** dialog:

- ◆ Copy and paste the following command in the **Command line** field:

```
chmod +x ./csia && ./csia -i && ./csia -c
```

- ◆ Set **Run mode** to **Run with administrative rights**

4. Finish the package creation and proceed with the deploying as described in [Parallels Mac Management Administrator Guide](#) page 116-117.
