

How to configure a theme for HTML5 Gateway page

- Parallels Remote Application Server

Information

In order to configure a theme for HTML5 Gateway, follow these steps:

1. Open **Remote Application Server Console**.
 2. Go to **Farm > Themes**.
 3. You can create a new theme by clicking on "+" button and configure it's filtering and appearance in the new window.
 4. Alternatively, you can change these settings for an existing theme by right-clicking on it > **Properties**.
