How to configure the languages of HTML5 Gateway

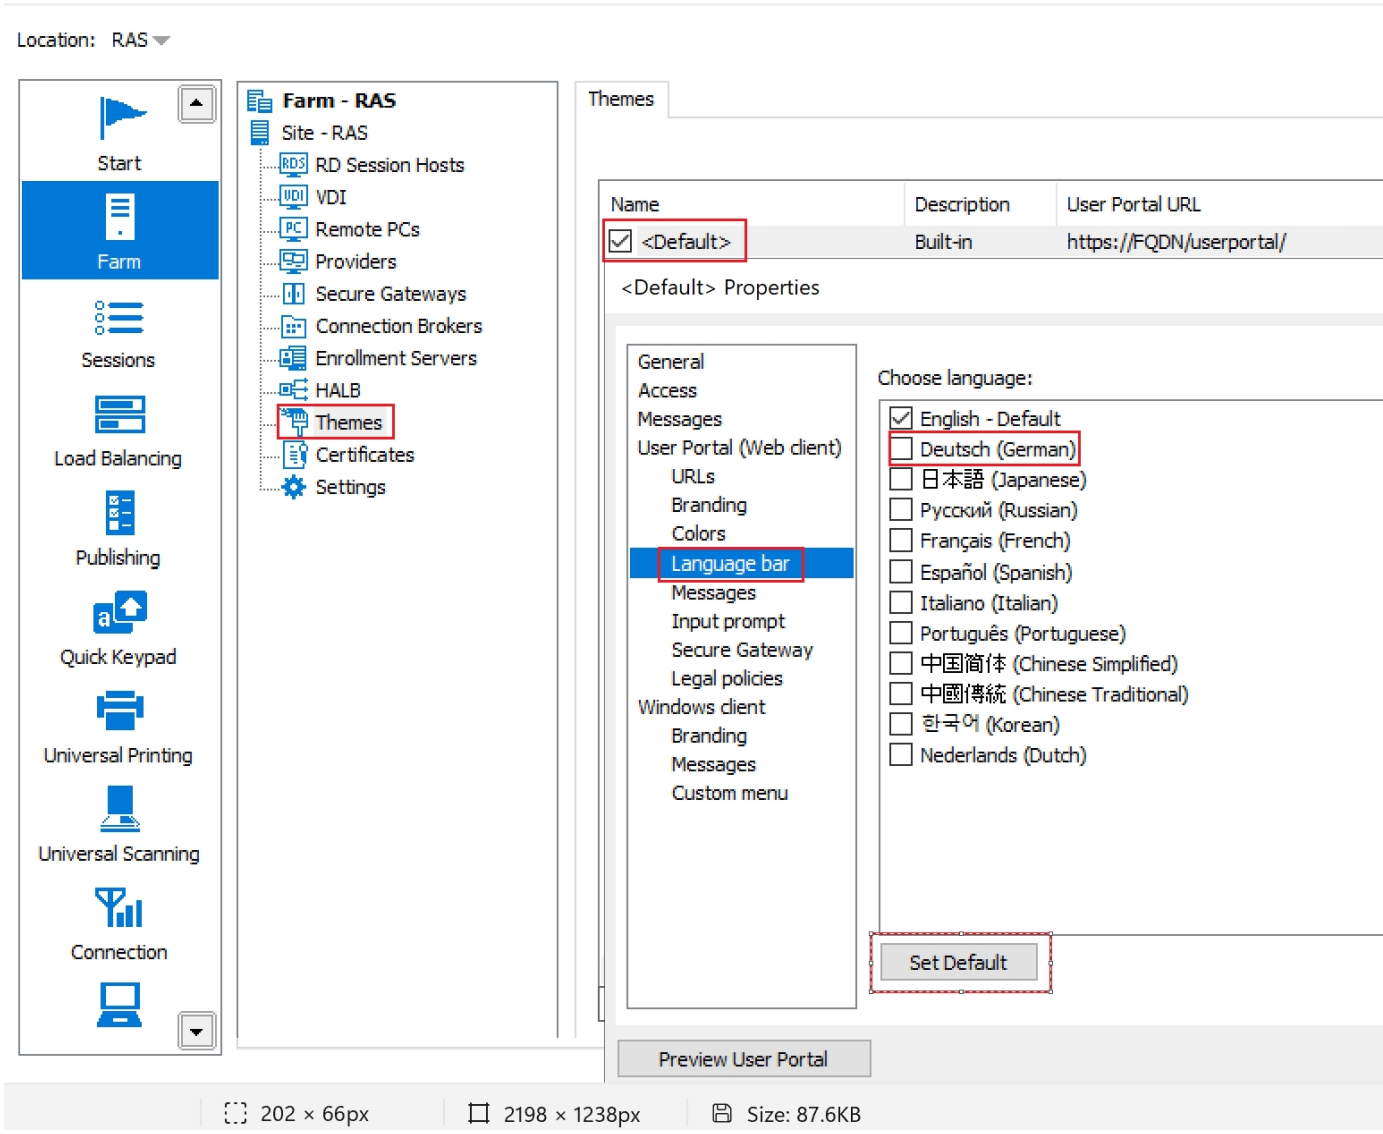

- Parallels Remote Application Server

Information

Since Parallels Remote Application Server v16, the language of HTML5 Gateway is set to English only.

To set other languages than English, follow these steps:

1. Open **Remote Application Server Console**.
2. Go to Farm > **Themes**.
3. Double-click the theme to open Properties.
4. Choose **Language Bar**.
5. Select the languages that will appear in the language selector on HTML5 Gateway page.
6. To change the default language, click and highlight the target language then click **Set Default** button.

7. Click **OK** button to close Theme Properties then click **Apply** button.
