

Maintenance windows are not respected when deploying Updates (patches)

- Parallels Mac Management 6.1
- Parallels Device Management

Symptoms

Maintenance windows are not respected when deploying Updates (patches)

Resolution

1. In SCCM Console navigate to **Assets and Compliance > Overview > Device Collections** > right-click required collection > **Properties > Maintenance Windows** > select/create one.
2. Change the value of **Apply the schedule to** to **Software updates**:

Correlation between types of maintenance windows and what is deployed:

- Software distribution = All deployments
 - Required application = All deployments
 - Software updates = Software updates
