Cannot run FileVault 2 Disk Encryption report after upgrading SCCM to version 1702

- Parallels Device Management

Symptoms

After upgrading SCCM to version 1702 it is no longer possible to run **FileVault 2 Disk Encryption** report.

Cause

After upgrading SCCM to version 1702 there are two DataSources in Reporting Service.

Resolution

In order to fix this behavior one should manually change DataSource which is used for **FileVault 2 Disk Encryption** report:

- Navigate to **Monitoring** - **Overview** - **Reporting** - **Reports**
- Select **FileVault 2 Disk Encryption** report from the list of reports;
- Right click on the report and select **Edit** in opened context menu - default web browser will be opened prompting for username and password;
- Provide **administrator** credentials;
- Application Run - Security Warning dialog should pop up (if it's not opened at first time because of the error please repeat previous steps again from the beginning);
- Click **Run** in opened dialog to download and launch Report Builder application;
- Wait till Report Builder app will be downloaded and started;
- In opened **FileVault 2 Disk Encryption - Microsoft SQL Server Report Builder**: expand **Data Sources** node in "Report Data" pane;
- Right click on "DataSource1" and click "Data Source Properties" in opened context menu;
- On **General** tab of opened **Data Source Properties** check which data source is selected. **It should look like /ConfigMgr_T15/ {39B693BB-524B-47DF-9FDB-9000C3118E82}**
- Click **Browse...** button;
- In opened Select Data Source window **double click on /ConfigMgr_/** and select another data source (should look like *{5C6358F2-4BB6-4a1b-A16E-8D96795D8602}*)
- Click **Open** button -> "Select Data Source" window will close;
- Ensure that just added data source selected in "Data Source Properties" dialog and click **OK** - "Data Source Properties" dialog will be closed;
- Click **Save** button;
- Run report again to verify that the issue is fixed.
