

OS X High Sierra OS corrupted after imaging a Mac

- Parallels Device Management

Symptoms

After imaging a Mac, there are a number of system wide issues observed. For example:

- AppStore does not display any content.
- Safari does not load any websites.
- Gatekeeper settings are wiped.

Cause

OS X image was captured from a High Sierra Mac, partitioned in **JHFS+**.

Resolution

Capture the OS X image from High Sierra Mac, partitioned in **APFS**.
