

How to setup Multi Language settings on RD Session Hosts

- Parallels Remote Application Server

Information

1. How to add additional languages to the RD Session Host:

Manually:

On the RD Session Host(s) navigate to:

Control Panel > Clock, Language, and Region > Language > Add a language

By using Group Policies:

[How to Set the Keyboard Layout through Group Policy \(GPO\)](#)

2. Language Bar position

Create a **GPO** that will modify **REG_DWORD ShowStatus** in the following **Registry Key**:

HKEY_CURRENT_USER\Software\Microsoft\CTF\LangBar

ShowStatus value	Language Bar position
0	Floating on Desktop
4	Docked on the Taskbar
3	Hidden

3. Setting different input method for each app window.

Manually:

On the RD Session Host(s) navigate to:

Control Panel > Clock, Language, and Region > Language > Advanced settings

And enable **Let me set a different input method for each app window** option.

By using Group Policies:

Create a GPO that will execute the following script on the RD Session Host(s):

```
PS C:\> Set-WinLanguageBarOptions -UseLegacySwitchMode -UseLegacyLanguageBar
```
